#### Graphics

**Adobe Photoshop** is a raster graphics editor developed and published by Adobe Systems for macOS and Windows. Photoshop was created in 1988 by Thomas and John Knoll. Since then, it has become the de facto industry standard in raster graphics editing, such that the word "photoshop" has become a verb as in "to Photoshop an image," "photoshopping" and "photoshop contest", though Adobe discourages such use.

**CorelDraw** is a vector graphics editor developed and marketed by Corel Corporation. It is also the name of Corel's Graphics Suite, which bundles CorelDraw with bitmap-image editor Corel Photo-Paint as well as other graphics-related programs. The latest version is designated X8 (equivalent to version 18), and was released in March 2016. CorelDraw is designed to edit two-dimensional images such as logos and posters.

**Adobe Illustrator** was first developed for the Apple Macintosh in December 1986 (shipping in January 1987) as a commercialization of Adobe's in-house first development software and PostScript file format. Adobe Illustrator is the companion product of Adobe Photoshop. Photoshop is primarily geared toward digital photo manipulation and photorealistic styles of computer illustration.

#### WEB

**HTML** stands for Hyper Text Markup Language and was developed by Berners-Lee in 1991. HTML is use to create static web pages on a website. HTML is a Markup language means that everything should be written inside the tags. HTML tags are the keywords surrounded by the angle brackets. HTML is not a case sensitive language and can be written in any text editor, like Notepad, Notepad++, Dreamweaver, etc.

**CSS** stands for Cascading Style Sheets. It describes how HTML elements appear on the screen. CSS provide easy and effective way to specify various attributes for the HTML tags. Using CSS, you can specify a number of style properties for a given HTML elements.

**JavaScript** is a scripting language commonly used in web development. It was developed by Netscape to build dynamic and interactive websites. JavaScript is a client-side scripting language, which means the source code is processed on client's web browser rather than on the web server. JavaScript is use to program the behavior of web pages.
